INTRODUCTION

Welcome to the new Unicef UK Baby Friendly Initiative learning outcomes for children’s nursing students. These learning outcomes are intended to set a standard for the level of knowledge and understanding of infant feeding that could be reasonably expected of a newly qualified children’s nurse. They are designed to be incorporated into children’s nursing students’ undergraduate curricula.

This is part of a suite of learning outcomes setting standards for the undergraduate courses of relevant healthcare practitioners who care for new babies, their mothers and families in UK public services.

BACKGROUND TO THE BABY FRIENDLY INITIATIVE

The Baby Friendly Initiative is a World Health Organization / Unicef accreditation programme designed to improve practice within healthcare settings in relation to infant feeding and parent-infant relationship building.

It sets standards for maternity, neonatal and community services and provides internal audit and external assessment to measure progress and sustainability over time. Services meeting the standards receive the prestigious Baby Friendly accreditation award, recognising their excellent practice.

The programme’s work to support breastfeeding is based on extensive and resounding evidence that breastfeeding saves lives, improves health and cuts costs in every country worldwide, rich and poor alike. However, breastfeeding is an emotive issue in the UK, because so many families have not breastfed, or have experienced the trauma of trying very hard to breastfeed and not succeeding. To ensure best outcomes for babies, their mothers and families, we must work to remove the myriad of barriers to breastfeeding in the UK – social, cultural, economic, physical and practical – to help mothers to breastfeed for as long as they wish.

A key part of this involves improving healthcare support around infant feeding. Our work has helped support this provision in maternity and community services, requiring that all qualified health professionals in Baby Friendly accredited services are educated to provide evidence-based and effective infant feeding support.

There is strong evidence for the Baby Friendly programme as a key intervention for supporting breastfeeding. Studies looking at the impact on UK breastfeeding rates have shown that giving birth in a Baby Friendly facility increases breastfeeding initiation. International studies have also shown a positive impact of Baby Friendly on breastfeeding initiation and duration, including in the US, Turkey, Switzerland, Belarus and in multi-country studies.

**EXPANSION OF THE PROGRAMME INTO UNIVERSITIES**

As the Baby Friendly programme became more established in health services, it was realised that this progress could be better supported if newly qualified health professionals entered the workplace already having a strong foundation of knowledge about infant feeding.

As a result, the Baby Friendly university programme was established, initially setting standards and learning outcomes for undergraduate midwifery and health visiting/public health nursing courses. These courses can progress to full Baby Friendly accreditation by undertaking internal audit and external assessment, using a similar process as that provided for healthcare settings.

**FURTHER DEVELOPMENT OF THE UNIVERSITY PROGRAMME: THE NEW LEARNING OUTCOMES**

Building on this success, we have now developed a suite of learning outcomes for other courses including for medical, pharmacy, dietetic and children’s nursing students.

These learning outcomes were developed by relevant clinical and academic experts to articulate the minimum knowledge and understanding it would be reasonable to expect from a health professional at the point of qualification. The aim is for students to gain an understanding of infant feeding, how to support it in practice, and how to access further learning.

Supporting materials such as slide sets are planned. While there are no plans to provide full assessment and accreditation for these courses at this time, it is hoped that the learning outcomes will provide a stimulus to universities to start to consider what should be covered in relevant curricula and then to take action to make that a reality.

We still have a long way to go before the health service as a whole, from doctors to dieticians to pharmacists, is enabled to support families effectively. However, with these new learning outcomes we hope to move in the right direction; towards an environment in which all families receive consistent infant feeding support and guidance throughout their whole journey in the health service.

THE LEARNING OUTCOMES

The learning outcomes are grouped into three broad themes that cover the essentials of infant feeding.

1. THE VALUE OF HUMAN MILK AND BREASTFEEDING

The value of human milk and breastfeeding for the short and long term health outcomes of babies and their mothers is well established.[1,17,18,19,20] It protects children from a vast range of illnesses including infection, diabetes, asthma, heart disease and Sudden Infant Death Syndrome (SIDS), as well as obesity, a major public health priority.[21,22,23,24]
For mothers, breastfeeding protects against breast and ovarian cancers and heart disease.[1,25,26,27] In addition, it supports the mother-baby relationship and the mental health of both baby and mother.[28,29]

2. SUPPORTING INFANT FEEDING

Whilst the Baby Friendly Initiative has made strong progress in improving care in maternity and community services, there are gaps in support provision beyond these services, and rates remain lower than in many other high income countries.[30] In the UK, most women want to breastfeed but many face difficulties early on and eight out of ten stop before they want to.[31] It is vital that all relevant health professionals understand how breastfeeding works and how to support the initiation and continuation of breastfeeding effectively. It is also important that they have the knowledge and skills to offer evidenced-based and practical support when babies are not breastfed.

3. INFANT FEEDING IN CONTEXT

Infant feeding in the UK is a highly contentious and controversial issue, influenced by commercial, social, cultural and political factors. Understanding the context in which babies are fed supports health professionals to be empathic and realistic in their communication and support.

THEME 1: THE VALUE OF HUMAN MILK AND BREASTFEEDING

1. Be aware of the main constituents of human milk and their function
2. Appreciate the importance of human milk and breastfeeding to health and wellbeing outcomes for infants, their mothers and the wider family.

THEME 2: SUPPORTING INFANT FEEDING

3. Understand the anatomy and physiology of lactation
4. Be able to describe the key practices that facilitate the initiation and maintenance of breastfeeding
5. Have the knowledge and skills to support mothers and babies to maximise breastmilk and breastfeeding, to continue to breastfeed for as long as they wish and to introduce solid foods appropriately
6. Be able to apply their knowledge of physiology and the principle of reciprocity to support all mothers to keep their babies close and to respond to their cues for feeding and comfort
7. Understand the circumstances which can affect lactation and breastfeeding, and be able to support mothers to overcome the challenges and make appropriate referrals when necessary
8. Be able to support parents who formula feed to do so responsively and as safely as possible.

THEME 3: INFANT FEEDING IN CONTEXT

9. Develop an understanding of the importance of secure mother-infant attachment and the impact this has on health and emotional wellbeing, irrespective of feeding method
10. Be able to apply their knowledge of effective communication to initiate sensitive, mother-centred conversations with new mothers and their families
11. Appreciate the wider social, cultural and political influences on infant feeding
12. Understand the importance of the WHO International Code of Marketing of Breastmilk Substitutes and subsequent WHA Resolutions (the Code) and how it impacts on practice.
CURRICULUM DEVELOPMENT

Below are the key topic areas to be included in order to cover each theme and enable the students to meet the learning outcomes. A mapping exercise can help the university to assess how far the topics are already covered and assessed in the curriculum, and to identify and plan for any additions to modules or design alternations needed.

It is important to ensure that the learning outcomes are covered in sufficient detail to enable the students to effectively implement the Baby Friendly standards in practice. Formal or informal assessment of the students’ learning against the learning outcomes is highly recommended in order to ensure that the teaching content and methods have been effective.

In the future we will be making teaching materials available to assist lecturers to enable students to meet these learning outcomes, including a slide pack to help lecturers deliver the content to students.

THEME 1: THE VALUE OF HUMAN MILK AND BREASTFEEDING

<table>
<thead>
<tr>
<th>LEARNING OUTCOMES</th>
</tr>
</thead>
<tbody>
<tr>
<td>■ Be aware of the main constituents of human milk and their function</td>
</tr>
<tr>
<td>■ Appreciate the importance of human milk and breastfeeding to health and wellbeing outcomes for infants, their mothers and the wider family.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>TOPICS</th>
</tr>
</thead>
<tbody>
<tr>
<td>■ Constituents of human milk - including colostrum and mature breastmilk</td>
</tr>
<tr>
<td>■ Protective and developmental functions - including the effect on the immune system, microbiome, developmental programming and growth</td>
</tr>
<tr>
<td>■ The role of human milk and breastfeeding in improving the health and wellbeing outcomes of infants, their mothers and the wider family.</td>
</tr>
</tbody>
</table>

THEME 2: SUPPORTING INFANT FEEDING

<table>
<thead>
<tr>
<th>LEARNING OUTCOMES</th>
</tr>
</thead>
<tbody>
<tr>
<td>■ Understand the anatomy and physiology of lactation</td>
</tr>
<tr>
<td>■ Be able to describe the key practices that facilitate the initiation and maintenance of breastfeeding</td>

</tr>
</tbody>
</table>
Importance of skin-to-skin contact to support breastfeeding and mothering (for all mothers irrespective of feeding type) and how to facilitate this within practice

Responsive breastfeeding and how mothers and babies develop a reciprocal relationship when they remain close

How a baby breastfeeds – understanding principles and mechanisms of attachment and positioning for effective feeding

Recognising effective breastfeeding; assessing milk production and milk transfer

Supporting breastfeeding mothers to maximise the amount of breastmilk their baby receives and protecting breastfeeding should supplementation be required

How hospitalisation can impact on maternal confidence in her ability to feed and care for her baby

Overview of common breastfeeding challenges including appropriate referral

Expression and storage of breastmilk to include hand and pump expression technique

Responsive bottle feeding, including how to hold a baby during a bottle feed and how to pace the feeds

Supporting parents who are bottle feeding to minimise the risks, to make up feeds safely and understand how to sterilise equipment

For mothers who are formula feeding, know how and where to access independent information on infant formula

Continued breastfeeding and the timely and appropriate introduction of other foods into the diet.

THEME 3: INFANT FEEDING IN CONTEXT

LEARNING OUTCOMES

- Develop an understanding of the importance of secure mother-infant attachment and the impact this has on health and emotional wellbeing, irrespective of feeding method
- Be able to apply their knowledge of effective communication to initiate sensitive, mother-centred conversations with new mothers and their families
- Appreciate the wider social, cultural and political influences on infant feeding
- Understand the importance of the WHO International Code of Marketing of Breastmilk Substitutes and subsequent WHA Resolutions (the Code) and how it impacts on practice.

TOPICS

- Overview of attachment theories and the importance of love and nurture on infant brain development
- Importance of compassionate, sensitive and effective communication. To include theory and practice
- Working with others in a multidisciplinary environment to support infant feeding, including appropriate referral
- Overview of infant feeding culture in the UK, social patterns and what has influenced changing breastfeeding rates in the UK and worldwide – including relevant data and the effect on health inequalities
- The WHO International Code of Marketing of Breastmilk Substitutes and subsequent resolutions and how they impact all infant feeding practices and their own sphere of practice
- Where to access evidence-based resources, applying theory to practice and implications for current children’s nursing practice.
